Multi-Safe disposal boxes

For safe disposal!

Pre-analytics

From blood collection to "Multi-Safe" disposal - Simple and Safe

Safety throughout the day

As a renowned manufacturer of Laboratory products and medical devices, we consider it our duty to provide safe disposal options for our single-use products.

As large and small waste is disposed of differently, our wide range of products offers a multitude of disposal options for our users. A variety of choice that is reflected in the different volumes, openings and multiple variants, even through to the final closure.

We ensure that all boxes meet the TRBA 250 (German regulations) as a minimum requirement so that we can guarantee the safe handling of the disposal box. Naturally our Multi-Safe disposal boxes also comply with international regulations, such as UN 3291 and ISO 23907.

As an independent family business, we are committed to the environment and future generations. Guided by this responsibility, we continuously optimise our actions in order to promote social growth, minimise our ecological footprint and consistently protect human health.

We pay far more than lip service to sustainable practices for our product lines. When developing, manufacturing and optimising our products, we attach great importance to resource-efficient processes and products, the use of recyclable materials and the promotion of reusable systems.

The new product line of Multi-Safe REC disposal boxes made from recycled plastic (Post-Consumer Recycled = PCR) is one current example of our sustainable approach, along with other sustainable product solutions. With a recycled content of at least 40 %* on the entire box and a CO₂e reduction of at least 33 %* it fulfils the requirement of ISO 23907 and UN 3291 at the same time.

*twin plus 5000 REC min. 15% recycled content, min. 12% CO₂e reduction.

Multi-Safe euroMatic®

Innovative design and engineering - The Premium Model

Automatic lid opening by
pressing the red button

- Square container form
- Robust container and lid
- Anti-tip mounting with adhesive adapter and/or wall holder (see accessories on page 24)
- Day and final closures allow one-handed operation of the lid (pressing the red "button" automatically opens the lid)
- Hinges on the day lid enable multiple opening/closing operations, while the secure final closure is visible by folding out the yellow ring
- Single-hand operation and large disposal opening enable fast and safe disposal of bulky objects
- Side grooves at the top edge visually confirm the closure of the container
- Side handle
- Various removal and turning aids

In the future will also
be available as a
sustainable version
made from recycled
plastic!

Integrated QR code for direct
online access to the operating
instructions

Handling

Safe handling of euroMatic®, steri, medi and twin plus disposal boxes

Centre the lid on the lower section of the box. The red day lid and the handle face forwards.

Simultaneously push on the opposite corners of the lid to join to lower box section.

The lid must be pressed in evenly along all edges, until it audibly and visibly locks into place.

Safe handling of the medi disposal boxes

Centre the lid on the lower section of the box. The yellow day lid faces forwards.

Simultaneously push on the opposite corners of the lid to join to lower box section

The lid must be pressed in evenly along all edges, until it audibly and visibly locks into place.

Safe handling of eco / Multi-Safe disposal boxes (lid-in-lid)

1
Centre the lid on the lower section of the box.

2
Simultaneously push on the opposite corners of the lid to join to lower box section.

3
The lid must be pressed in evenly along all edges, until it audibly and visibly locks into place.

Day closure

1 x lock into place
(for reuse)

Final closure

2 x lock into place
(completely sealed)

Multi-Safe Instructions for Use

Intended use: The disposal container is exclusively intended to dispose of pointed and sharp objects, such as needles and scalpel blades from the medical field.

Safety instructions

- Only use containers of a size that is suitable for holding the items to be disposed of.
- Store the box out of the reach of children.
- The lid must be on the container and locked into place before it is filled.
- Connect containers with the recommended adhesive adapter by rotating or hanging in the wall holder to prevent accidents.
- Do not use the day lid to press down the items to be disposed of.
- Scalpels must be disposed of in the container with particular care. If too much force is used when throwing scalpels in or if other items are placed on top, there is a risk of the angle changing and damaging the container walls or the base of the container.
- Only place items to be disposed of upright in the container.
- Do not press items into the container with force.
- Do not place any liquids in the container.
- Do not fill the box above the fill line (risk of injury!).
- Do not place hands or any other objects in the container (risk of injury).
- Do not throw the box. Do not shake the box. Do not drop the box.
- Before sealing the container, ensure that no items are projecting through the opening.
- Close the box by hand, without applying too much force.
- Do not push the box against your body (e.g. chest) for the final closure.
- Do not compress a full box.
- Use the handle.
- Before disposing of the box, check carefully that the lid is tightly closed.

ISO 23907

- One of the absorbent liners from page 25 must be used to ensure the compliant use of the box.

Disposal and the environment

- Plastics used in our products are environmentally neutral in terms of disposal.
- The plastic can be sent to landfill, as they do not release any harmful substances into the air, earth or water.
- When disposed of in incinerators, the plastics PS, PP, PC and PE serve as valuable sources of energy to maintain the temperature in the combustion chamber – the more plastic in the waste, the less heating oil is used. Burning these plastics does not release any hazardous emissions.

Recommendation:

Only fill the Multi-Safe container to about 2/3 of its volume. Do not overfill the Multi-Safe: Risk of injury!

Fill line

Material info

	Polystyrene	Polypropylene	Polycarbonate	Polyethylene
Abbreviation	PS	PP	PC	HD-PE High Density LD-PE Low Density
Optical properties	Transparent, shiny surface with 90% light transmission (at 400-800 nm)	Translucent, shiny surface	Transparent, 88% light transmission (at 400-800 nm)	Translucent to opaque, waxy surface
General mechanical properties	Low elongation at break and thermal resistance, very good electrical insulating properties, not suitable for high centrifuge speeds	High level of break resistance, resistant to stress cracking, stable form and high rigidity	Very good mechanical, optical, electrical and thermal properties, can be autoclaved and sterilised	Relatively low tensile strength and surface hardness, high toughness, soft to firm, sensitive to stress cracking, water-repellent
Autoclavability	Not suitable	Products made of PP can be autoclaved up to 121°C without any appreciable loss of mechanical properties. The user must check whether other product characteristics are affected with regard to the desired use.	Products made of PC can be autoclaved up to 121 °C without any appreciable loss of mechanical properties. The user must check whether other product characteristics are affected with regard to the desired use.	Not suitable
Max. temperature for contentious use* ¹	60 - 70°C	100 - 110°C	115 - 125°C	HD-PE 70 - 80°C LD-PE 60 - 75°C
Temporary maximum temperature for use* ¹	75 - 80°C	120 - 140°C	125 - 140°C	HD-PE 90 - 120 °C LD-PE 80 - 90 °C
Use at sub-zero temperatures* ²	Not well-suited	Limited suitability* ¹	down to -80°C	Limited suitability* ¹
Density g/cm ³	1.05	0.90	1.19	HD-PE 0.95 LD-PE 0.92

	300 - 400°C	300 - 360°C	380 - 450°C	350 - 360°C
Moisture absorption	< 0.1%	< 0.1%	0.1 - 0.3%	< 0.1%
General resistance to chemicals	PS is resistant to saline solutions, alkaline solutions, non-oxidising acids, alkalis and alcohols. Benzene, volatile oils, strongly oxidising agents and flavourings attack PS, resulting in stress cracking.	PP is resistant to aqueous solutions of inorganic salts, acids, alkalis and to organic solvents up to 60°C. Alcohols, esters and ketones also do not attack PP. Aromatic and halogenated hydrocarbons, oxidising substances such as concentrated nitric acid and fats, oils and waxes at high temperatures cause PP to swell.	PC is resistant to higher concentrations of mineral acids, many organic acids (e.g. carbonic acid, oleic acid and citric acid), oxidants, reducing agents, neutral and acidic saline solutions, a range of fats and oils, saturated, aliphatic and cycloaliphatic hydrocarbons and alcohols (except methanol). Bases, ammonia gas and its soluble form, and amines attack PC. PC is soluble in a range of industrial solvents. Other organic compounds such as benzene, acetone and carbon tetrachloride may lead to expansion or swelling.	PE has a high resistance to chemicals. The chemical resistance of HD-PE is generally higher than that of LD-PE. Diluted acids, alkalis, alcohol, oil and water and saline solutions do not affect PE. Concentrated, oxidising acids, such as nitric acid and halogens have a disintegrating effect.
Disposal	PS is a pure hydrocarbon compound and thus environmentally neutral in terms of disposal. The controlled burning of this plastic does not release any hazardous emissions.	PP is a pure hydrocarbon compound and thus environmentally neutral in terms of disposal. The controlled burning of this plastic does not release any hazardous emissions.	PP is a pure hydrocarbon compound and thus environmentally neutral in terms of disposal. The controlled burning of this plastic does not release any hazardous emissions.	PE is a pure hydrocarbon compound and thus environmentally neutral in terms of disposal. The controlled burning of this plastic does not release any hazardous emissions.

*¹ Suitability depends on the type of plastic used and the type of stress load

*² Warning: The plastic becomes brittle at sub-zero temperatures. The use of products at sub-zero temperatures should be tested in advance for the relevant application. This information is intended as a guide and does not guarantee product properties.
